Blinkit Business Dashboard

Blinkit, one of India's leading quick-commerce companies.

Business Problem Statement:

The grocery retail business operates across multiple outlet types and locations, offering a wide variety of products.

However, the company faces challenges in:

- Understanding **which products and categories drive maximum sales**
- Evaluating **outlet performance across different tiers and types**
- Measuring **operational efficiency (sales per outlet, sales per item, etc.)**
- Optimizing **product placement and inventory decisions**

Data Cleaning & Transformation

1. Standardized Item Fat Content
- Removed inconsistent values (LF, low fat, reg)
- Converted into 2 uniform categories:
  - **Low Fat**
  - **Regular**

2. Handled Missing Values (Item Weight)
- Identified **1,463 missing values**
- Replaced using **average weight per Item Type**
- Ensured more accurate imputation than global average

3. Fixed Zero Values (Item Visibility)
- Found **526 zero values** (invalid data)
- Replaced with **average visibility per Item Type**
- Maintained realistic product visibility

4. Data Formatting & Consistency
- Standardized numerical precision:
  - Item Weight → 2 decimal places
  - Item Visibility → 4 decimal places
  - Sales → 2 decimal places

DAX Measures

Total Sales

- Calculates total revenue generated across all outlets

Avg Sales

- Shows average sales value

No. of Items

- Counts total unique products using Item Identifier
- Helps understand product variety

Item Rank

- Ranks items based on sales performance
- Used to identify top-performing products

Sales by Fat Content

- Compares sales between Low Fat and Regular items
- Helps analyze customer preference

Sales by Outlet Type

- Shows performance across different outlet formats
- Helps identify best-performing outlet category

Sales by Tier

- Compares sales across Tier 1, Tier 2, and Tier 3 locations
- Useful for location-based analysisis

Avg Rating

- Calculates average customer rating
- Indicates customer satisfaction level

Sales by Outlet Size

- Compares performance across small, medium, and large outlets

KPI Cards

- Total Sales
- Average Sales
- Average Item Rating
- No. of items

Slicers

- Outlet Location
- Outlet Type
- Item fat content
- Item Type

Visuals

- Bar / Column Charts: Sales by Item Type, Outlet Type, and Tier
- Area Chart: Total sales by outlet establishment year
- Pie / Donut Chart: Fat Content Distribution
  Sales by Outlet establishment year
- Funnel Chart: Sales Conversion by Outlet Type
- Matrix / Table: Total sales, average sales, no. of items, Rating

Total	**12,01,681.72**	**1,20,168.17**	**1559**	**33418**

Key Findings Summary

- Supermarket Type1 is the **top-performing outlet type**
- Tier 3 locations generate **higher sales**
- Visibility has **limited impact on sales**
- Customer ratings **strongly influence performance**
- Few products contribute to **majority of revenue**

Final Recommendations

1. Expand **high-performing outlet types (Supermarket Type1)**
2. Focus on **top-selling product categories**
3. Improve **low-performing outlets using best practices**
4. Use **customer ratings** to guide product strategy
5. Optimize inventory using **data-driven decisions**
6. Do not rely only on visibility — focus on **demand & quality**
